RESVINET IS AN INITIATIVE OF JULIUS CLINICAL AND THE UMC UTRECHT

The **vision** of **ReSViNET** is to combine expertise and leadership in order to decrease the global burden of RSV infection. Their **mission** is to support performance of high quality research, to improve knowledge of RSV epidemiology, and to develop safe and effective therapeutic and preventive interventions.

ReSViNET is the first international, integrated, multidisciplinary and translational research oriented scientific group focused on RSV infection with the goal to support performance of high quality research, to improve knowledge of RSV epidemiology, and to develop safe and effective therapeutic and preventive interventions.

The goals of **ReSViNE**T are:

- To stimulate and perform cutting- edge research.

- To advocate appropriate allocation of resources for RSV related research and introduction of prevention and treatment strategies for better care for patients with RSV infection.

- To bring together information related to RSV infection to all stakeholders.

- To act as a focal point for effective partnerships with stakeholders with the ultimate aim of reducing global child morbidity and mortality.

Ongoing activities:

- Recognition of key RSV scientific papers via ReSViNET 'Paper of the Month' notifications

ReSViNET hosted a High Level Expert Meeting on RSV therapeutics for RSV professionals and industry which will took place in the Netherlands on January 20 & 21, 2015
